

## Create an Identity

An API key is created when an identity is created in Subledger.

The response contains both an `active_identity` and an `active_key` with your credentials so you can securely interact with Subledger.

𪔐  
 𪔑  
 𪔒  
 𪔓  
 𪔔  
 𪔕

and the response received should look like this:

{ 𪔐 𪔑 𪔒 𪔓 𪔔 𪔕 𪔖 𪔗 𪔘 𪔙 𪔚 𪔛 }

We recommend storing this entire response securely for future reference. It is possible to create additional keys and archive active keys to disable them. This allows for key rotations to be performed where multiple keys are active during the rotation.
